

# Phase\_B\_Business\_Architecture

## TOGAF ADM - Phase B: Business Architecture

*Purpose: Develop the Target Business Architecture*

### Overview

| PHASE B: BUSINESS ARCHITECTURE                                                           |
|------------------------------------------------------------------------------------------|
| PURPOSE: Define HOW THE BUSINESS WORKS (today and future)                                |
| FOCUS: Business processes, capabilities, organization<br>(NOT technical implementation!) |

### What Business Architecture IS and IS NOT

BUSINESS ARCHITECTURE IS ABOUT:

=====

NOT about:

- Technical implementation details
- Specific software/hardware
- Coding/development

IS about:

- Business processes (how work flows)
- Business capabilities (what business can do)
- Business services (what business offers)
- Organization (who does what)
- Information flows (what data moves where)
- Gap between current and future state

# Key Activities

## 1. Develop Baseline Business Architecture

BASELINE BUSINESS ARCHITECTURE = "As-Is" State

Documents HOW THE BUSINESS WORKS TODAY:

- Current business processes
- Current organization structure
- Current business capabilities
- Current business services
- Current information flows
- Current pain points & gaps

## Why Baseline Matters

| REASON                   | EXPLANATION                             |
|--------------------------|-----------------------------------------|
| Understand current state | Can't improve what you don't understand |
| Identify gaps            | Compare with target to find gaps        |
| Stakeholder alignment    | Everyone agrees on "where we are"       |
| Realistic planning       | Know what needs to change               |
| Risk assessment          | Understand dependencies & impacts       |
| Measure progress         | Baseline for measuring improvement      |

## 2. Develop Target Business Architecture

TARGET BUSINESS ARCHITECTURE = "To-Be" State

Documents HOW THE BUSINESS WILL WORK IN FUTURE:

- Improved business processes
- New organization structure (if needed)
- Enhanced business capabilities
- New business services
- Optimized information flows
- Problems solved

## Baseline vs Target

| BASELINE (As-Is)         | TARGET (To-Be)                |
|--------------------------|-------------------------------|
| How business works TODAY | How business will work FUTURE |

**BASELINE (As-Is)****TARGET (To-Be)**

Current processes

Improved/new processes

Current capabilities

Enhanced capabilities

Current problems

Problems solved

Documented FIRST

Designed AFTER baseline

### 3. Perform Gap Analysis

1. BASELINE BUSINESS FLOW --> Current state (As-Is)  
+
2. TARGET BUSINESS FLOW --> Future state (To-Be)  
+
3. GAP ANALYSIS --> What needs to change

## Business Architecture Components

**BUSINESS ARCHITECTURE COMPONENTS**

1. BUSINESS PROCESSES
  - └ How work flows through the organization  
Example: Order-to-Cash, Procure-to-Pay
2. BUSINESS CAPABILITIES
  - └ What the business can DO  
Example: Customer Management, Payment Processing
3. BUSINESS SERVICES
  - └ What the business OFFERS  
Example: Account Opening, Loan Processing
4. ORGANIZATION STRUCTURE
  - └ Who does what, reporting lines  
Example: Sales → Marketing → Operations
5. INFORMATION FLOWS
  - └ What data moves where  
Example: Customer data flows from CRM to Billing
6. BUSINESS ACTORS
  - └ People and systems that interact  
Example: Customers, Partners, Internal Staff

# Key Deliverables

| Deliverable                    | Description                                   |
|--------------------------------|-----------------------------------------------|
| Business Architecture Document | Complete documentation of baseline and target |
| Gap Analysis Results           | What needs to change to reach target          |
| Business Process Models        | BPMN diagrams of processes                    |
| Capability Map                 | Visual of business capabilities               |
| Organization Chart             | Structure and roles                           |
| Value Stream Maps              | How value flows to customers                  |

# Example: Gaming Platform

BUSINESS ARCHITECTURE EXAMPLE (Gaming):

BASELINE (Current):

- Manual player onboarding (3 days)
- Separate systems for each game
- No unified player view
- Manual bonus calculations

TARGET (Future):

- Automated player onboarding (minutes)
- Unified gaming platform
- 360° player view
- Automated bonus engine

GAPS:

- Need unified player management
- Need automated onboarding
- Need integrated bonus system
- Need single platform architecture

# Summary

- PHASE B = "UNDERSTAND THE BUSINESS"
- Document current business (Baseline)
  - Design future business (Target)
  - Identify what needs to change (Gap Analysis)

FOCUS: Business, NOT technology!

OUTPUT: Business Architecture Document + Gap Analysis
