

TOGAF_Cheat_Sheet

TOGAF 9.2 Quick Reference Cheat Sheet

Based on TOGAF 9.2 (April 2018)

ADM Phases at a Glance

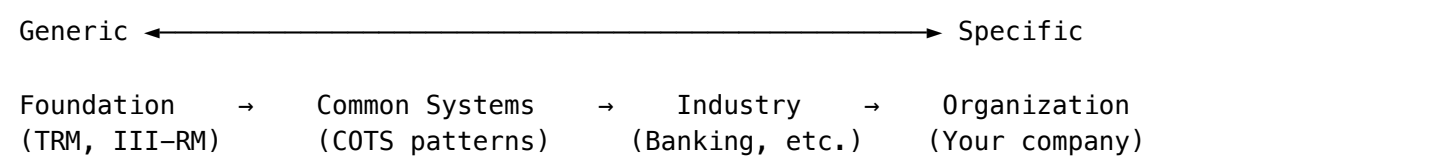

Four Architecture Domains (BDAT)

Domain	Focus	Key Questions
Business	Strategy, processes, governance	What does the business do?
Data	Data entities, data management	What information is needed?
Application	Applications, interactions	What applications support the business?
Technology	Infrastructure, platforms	What technology enables applications?

Building Blocks Comparison

Aspect	ABB (Architecture)	SBB (Solution)
Defines	WHAT is needed	HOW it's implemented
Abstraction	High level	Detailed
Technology	Agnostic	Specific
Example	"Payment Processing"	"Stripe API Integration"

Enterprise Continuum Spectrum

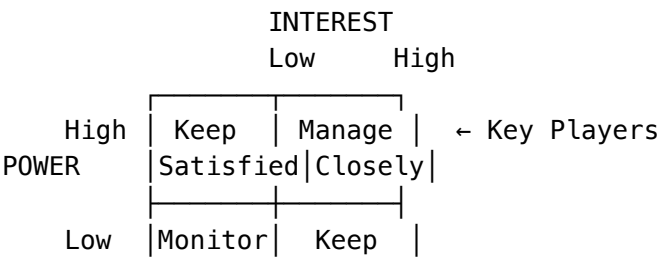

Key Deliverables by Phase

Phase	Key Deliverables
Preliminary	Architecture Principles, Organizational Model
A	Statement of Architecture Work, Architecture Vision
B	Business Architecture Document
C	Data Architecture, Application Architecture
D	Technology Architecture Document
E	Implementation Strategy, Transition Architectures
F	Implementation & Migration Plan
G	Architecture Contract, Compliance Assessments
H	Architecture Updates, Change Requests

Architecture Principle Template

NAME: [Principle Name]
STATEMENT: [What the principle is]
RATIONALE: [Why it matters]
IMPLICATIONS: [What it means in practice]

Stakeholder Power/Interest Grid

Architecture Repository Components

Component	Purpose
Architecture Metamodel	Structure for organizing architecture
Architecture Capability	People, processes, tools for EA
Architecture Landscape	Current and future state views
Standards Information Base	Approved standards
Reference Library	Templates, patterns, guidelines
Governance Log	Decisions, compliance records

Key TOGAF Concepts - One Liners

Concept	Definition
View	Representation of system from stakeholder perspective
Viewpoint	Template for creating views
Concern	Stakeholder interest in the system
Artifact	Work product describing aspect of architecture
Deliverable	Contractually specified output
Gap Analysis	Difference between baseline and target
Architecture Contract	Agreement on deliverables and conformance
Dispensation	Approved deviation from standards

Common Phase Activities

All Phases Include:

1. Select reference models and tools
2. Develop architecture descriptions
3. Perform gap analysis

4. Define candidate roadmap components
5. Resolve impacts across landscape
6. Conduct stakeholder review
7. Create Architecture Definition Document

Iteration Types in ADM

Type	Description
Architecture Capability	Iterate to establish initial capability
Architecture Development	Iterate across phases to develop content
Transition Planning	Iterate to create transition architectures
Architecture Governance	Iterate to govern implementations

Quick Tips for Interviews

1. **ADM is iterative** - Not strictly linear
2. **Requirements Management is continuous** - Always at center
3. **Phase C has two parts** - Data AND Application
4. **Phase E creates strategy** - Phase F creates detailed plan
5. **Phase G is oversight** - Not implementation itself
6. **Business architecture FIRST** - Then technical (B→C→D)
7. **Stakeholders are key** - Address in every phase
8. **Principles guide decisions** - Established in Preliminary

Acronyms to Know

Acronym	Full Form
ADM	Architecture Development Method
ABB	Architecture Building Block
SBB	Solution Building Block
TRM	Technical Reference Model
III-RM	Integrated Information Infrastructure Reference Model
SOW	Statement of Architecture Work

Acronym	Full Form
SIB	Standards Information Base
EA	Enterprise Architecture

Phase Mnemonics

"Please Allow Business Changes During Every Full Governance Hour"

- Preliminary
- Architecture Vision
- Business Architecture
- Changes (Information Systems - Data/App)
- During (Technology)
- Every (Opportunities & Solutions)
- Full (Migration Planning)
- Governance (Implementation Governance)
- Hour (Change Management)
