

TOGAF_Interview_Guide

TOGAF 9.2 Interview Preparation Guide

Based on TOGAF 9.2 (April 2018)

Table of Contents

- 1. [What is TOGAF?](#)
- 2. [TOGAF Architecture Development Method \(ADM\)](#)
- 3. [Key Concepts & Terminology](#)
- 4. [Common Interview Questions](#)
- 5. [Study Tips](#)

What is TOGAF?

TOGAF (The Open Group Architecture Framework) is an enterprise architecture framework that provides a comprehensive approach to designing, planning, implementing, and governing enterprise information technology architecture.

Key Facts:

- Developed by **The Open Group**
- First introduced in **1995** (based on TAFIM from US DoD)
- Current version: **TOGAF 9.2** (released April 2018)
- Used by **80%+ of Global 50 companies**
- Provides a common vocabulary and methodology

Four Architecture Domains:

Domain	Description
Business Architecture	Business strategy, governance, organization, and key business processes
Data Architecture	Structure of logical and physical data assets and data management resources

Domain	Description
Application Architecture	Blueprint for individual applications, their interactions, and relationships
Technology Architecture	Software and hardware capabilities required to support business, data, and application services

TOGAF Architecture Development Method (ADM)

The **ADM** is the core of TOGAF - an iterative, step-by-step approach to developing enterprise architecture.

Requirements Management (Center – All Phases)

ADM Phases Explained:

Preliminary Phase

- **Purpose:** Prepare the organization for TOGAF projects
- **Key Activities:**
 - Define Architecture Capability(people,process ,tools,governance,standrds)

DOES: | EA

1. CREATE TEAM || | Enterprise Architects, Domain Architects, support staff ||| 2. SETUP TOOLS || | Sparx EA, Archi, Confluence, Draw.io ||| 3. DEFINE PRINCIPLES || | Cloud-First, Security by Design, Buy over Build ||| 4. ESTABLISH GOVERNANCE || | Architecture Board, Review process, Compliance ||| 5. DEFINE STANDARDS || | Technology standards, Patterns, Reference architectures ||| All this happens in PRELIMINARY PHASE (once) || Then EA GUIDES all projects using these! |||

- Establish Architecture Principles

PRINCIPLES GUIDE EVERY PROJECT |

PRELIMINARY: Define Principles (ONCE) ||

• Cloud-First || • Security by Design || • Buy over Build || • API-First || • Data is an Asset | ||||| These GUIDE every project || ▼ ||

||||| PROJECT 1:
 Payment System |||| Driver: "Reduce latency" |||| Decision: "Should we use on-prem or cloud?" |||| → Check Principle: "Cloud-First" → Use Cloud ☒ ||||||| PROJECT 2:
 CRM Selection |||| Driver: "Need better customer management" |||| Decision: "Should we build custom CRM or buy?" |||| → Check Principle: "Buy over Build" → Buy Salesforce ☒ ||||||| PROJECT 3: Mobile App |||| Driver: "Launch mobile experience" |||| Decision: "How to handle authentication?" |||| → Check Principle: "Security by Design" → OAuth from start ☒ |||||||

|||| PRINCIPLES =
 Consistent decision-making across ALL projects |||

Architecture Principles	Architecture Requirements (NFRs)
Guiding philosophy	Specific metrics
"Systems should be resilient"	"99.99% uptime"
"Prefer cloud-first approach"	"Must use AWS/Azure"
"Design for performance"	"100ms latency"
"Systems should be loosely coupled"	"Use microservices with REST APIs"
WHY we design a certain way	WHAT we must achieve

- Select and tailor frameworks/tools
- **Key Deliverable:** Organizational Model for EA, Architecture Principles

Phase A: Architecture Vision

- **Purpose:** Develop high-level vision of capabilities and business value
- **Key Activities:**

| PHASE A - 6 KEY ACTIVITIES |

||| 1. IDENTIFY STAKEHOLDERS & CONCERNS |||| 2. CONFIRM BUSINESS GOALS & DRIVERS |||| 3. DEFINE SCOPE |||| 4. CREATE ARCHITECTURE VISION |||| 5. ASSESS READINESS FOR TRANSFORMATION |||| 6. OBTAIN APPROVAL (Statement of Architecture Work) |||

-Stake holders part

STAKEHOLDER DOMAINS

BUSINESS IT EXTERNAL

• CEO/COO • CIO/CTO • Customers • Business Unit • IT Operations • Vendors/Partners • Heads • Developers • Regulators • Process Owners • Infrastructure • Auditors • End Users • Security • Industry Bodies • Finance/CFO • Data Teams • Shareholders • HR • PMO • Suppliers

PHASE A: ARCHITECTURE VISION	1.
------------------------------	----

IDENTIFY Stakeholders From Business, IT, External domains 2. ANALYZE Stakeholders Power/Interest mapping Concerns identification Communication needs 3. DOCUMENT in Architecture Vision Stakeholder Map Concerns Matrix Communication Plan 4. GET APPROVAL Statement of Architecture Work signed by key stakeholders RACI Matrix (R=Responsible, A=Accountable, C=Consulted, I=Informed)
--

ACTIVITY	CIO	Sr. EA	Bus.Owner	Dev Team
----------	-----	--------	-----------	----------

Define Vision	A	R	C	I	Gather Reqmts	I	A	R	C	Approve Vision	A	R	C	I	Implementation	I	C	I	R
---------------	---	---	---	---	---------------	---	---	---	---	----------------	---	---	---	---	----------------	---	---	---	---

CONCERNS MATRIX

STAKEHOLDER	CONCERNS
-------------	----------

CEO	ROI, Business value, Risk
-----	---------------------------

CIO	Cost, Timeline, Integration
-----	-----------------------------

End Users	Easy to use, Fast, Reliable
-----------	-----------------------------

IT Operations	Maintainability, Availability, Support
---------------	--

Security Officer	Data protection, Compliance, Access control
------------------	---

STEP 1: List all stakeholders From Stakeholder Map

STEP 2: Interview/Survey each stakeholder — "What matters most to you?"

STEP 3: Document concerns — Be specific, not vague

STEP 4: Prioritize concerns — High / Medium / Low

STEP 5: Map to architecture views — Which view addresses which concern?

STEP 6: Validate with stakeholders — "Did I capture your concerns correctly?" - Create Architecture Vision - Obtain approval for Statement of Architecture Work

		ACTIVITY 2: CONFIRM
BUSINESS GOALS & DRIVERS		
		WHAT TO DO: •
Understand WHY this project exists • Identify business problems to solve • Confirm strategic goals being supported EXAMPLE BUSINESS DRIVERS:		
		• "We need to enter new markets faster" • "Our costs are too high" • "Competitors are ahead of us" • "Regulations require us to change" • "Customer experience is poor" • "Legacy systems are holding us back"
		OUTPUT: Business Goals document, Key Drivers list
		STEP 3: DEFINE SCOPE
"WHAT is included and WHAT is NOT included in this architecture?"		
		WHY SCOPE MATTERS
		WITHOUT CLEAR SCOPE: • Scope creep (project keeps growing) • Unclear expectations • Wasted effort on wrong things • Never-ending project • Stakeholder conflicts WITH CLEAR SCOPE: • Everyone knows what's included • Clear boundaries = focused effort • Easier to estimate time & cost • Can say "NO" to out-of-scope requests • Stakeholders aligned

| SCOPE DIMENSIONS |

||| 1. BREADTH (Organizational Scope) || — WHICH parts of the organization? || • Entire enterprise? || • One business unit? || • One department? || • One system/application? ||| 2. DEPTH (Level of Detail) || — HOW detailed will the architecture be? || • Strategic (high-level overview) || • Segment (business unit level) || • Capability (detailed)

||| DEPTH LEVELS = ZOOM

LEVELS ON A MAP 🗺️ ||| STRATEGIC = Country view ("India wants digital economy") || SEGMENT = City view ("Mumbai needs better transit") || CAPABILITY = Street view ("Build Metro Line 3, Station X") ||| Same project, different zoom levels for different audiences! |||

||| 3. ARCHITECTURE

DOMAINS || — WHICH domains are included? || • Business Architecture? (B) || • Data Architecture? (C) || • Application Architecture? (C) || • Technology Architecture? (D) || • All of them?

||| 4. TIME HORIZON || — WHEN is the target state? || • 1 year? || • 3 years? || • 5 years? |||

| ARCHITECTURE VISION DOCUMENT |

| 1. Problem Description | 2. Objectives & Scope | 3. Stakeholder Map & Concerns | 4. Business Scenario (if used) | 5. High-Level Baseline Architecture | 6. High-Level Target Architecture | 7. Gap Analysis (High-Level) | 8. Key Architecture Requirements | 9. Risks & Constraints | 10. Business Value & Benefits | 11. Architecture Principles (Applicable) | 12. Approval & Sign-off |

STATEMENT OF ARCHITECTURE WORK

| 1. TITLE | 2. REQUEST | PROJECT | 3. DESCRIPTION | 4. SCOPE | BASICS | 5. VISION | 6. ROLES | WORK | 7. DELIVERABLES | 8. ACCEPTANCE | DETAILS | 9. SCHEDULE | 10. RESOURCES | HOW | 11. RISKS | 12. CONSTRAINTS | WE DO IT

STAKEHOLDERS| 14. APPROVALS | WHO

4 + 4 + 4 + 2 = 14 items

SECTION	DESCRIPTION
1. Project Title	Name of the architecture initiative
2. Project Request	Why this project was initiated
3. Project Description	Brief overview of what will be done
4. Scope	What’s included and excluded
5. Architecture Vision	Summary of target state
6. Roles & Responsibilities	Who does what (RACI)
7. Deliverables	What will be produced
8. Acceptance Criteria	How success is measured
9. Schedule & Milestones	Timeline with key dates
10. Resources	People, budget, tools needed
11. Risks & Mitigation	Potential issues and plans
12. Constraints	Limitations (time, budget, etc.)
13. Stakeholders	Key people involved
14. Approvals	Sign-off secti

"Here's where we are, where architecture project" we're going, and why"		"Here's how we'll run the	

Key Deliverables: Statement of Architecture Work, Architecture Vision document ##### **Phase B: Business Architecture - Purpose:** Develop the Target Business Architecture - **Key Activities:**

BUSINESS ARCHITECTURE IS ABOUT:

NOT about: - Technical implementation details - Specific software/hardware - Coding/development

IS about: - Business processes (how work flows) - Business capabilities (what business can do) - Business services (what business offers) - Organization (who does what) - Information flows (what data moves where) - Gap between current and future state - Develop Baseline Business Architecture

BASELINE BUSINESS ARCHITECTURE = "As-Is" State

Documents HOW THE BUSINESS WORKS TODAY: - Current business processes - Current organization structure - Current business capabilities - Current business services - Current information flows - Current pain points & gaps REASON | EXPLANATION —————|

————— Understand current state | Can't improve what you don't understand
Identify gaps | Compare with target to find gaps Stakeholder alignment | Everyone agrees on "where we are" Realistic planning | Know what needs to change Risk assessment | Understand dependencies & impacts Measure progress | Baseline for measuring improvement

BASELINE (As-Is)	TARGET (To-Be)
How business works TODAY	How business will work FUTURE
Current processes	Improved/new processes
Current capabilities	Enhanced capabilities
Current problems	Problems solved
Documented FIRST	Designed AFTER baseline

- Develop Target Business Architecture

1. BASELINE BUSINESS FLOW → Current state (As-Is) +
2. TARGET BUSINESS FLOW → Future state (To-Be) +
3. GAP ANALYSIS → What needs to change

- Perform Gap Analysis
- **Key Deliverables:** Business Architecture document, Gap Analysis results

Phase C: Information Systems Architecture

- **Purpose:** Develop Data and Application Architectures
- **Key Activities:**
 - Develop Data Architecture (logical & physical data models)
 - Develop Application Architecture
 - Perform Gap Analysis
- **Key Deliverables:** Data Architecture, Application Architecture documents
 DATA ARCHITECTURE: |—— Player Data (profiles, preferences, history) |—— Game Data (scores, achievements, leaderboards)
 |—— Transaction Data (purchases, wallets, payouts) |—— Analytics Data (behavior, engagement metrics)

APPLICATION ARCHITECTURE: |—— Player Management System |—— Game Engine Integration
 |—— Payment Gateway |—— Bonus & Promotion Engine |—— Responsible Gaming Module
 |—— Reporting & Analytics Platform |—— Back Office Admin Portal

GAP ANALYSIS: • Current: Separate DBs per game → Target: Unified Player 360 view • Current: Batch reporting → Target: Real-time analytics • Current: Point-to-point integrations → Target: Event-driven (Kafka)

Phase D: Technology Architecture

- **Purpose:** Develop the Technology Architecture
- **Key Activities:**
 - Define technology platforms
 - Map applications to technology
 - Perform Gap Analysis

Purpose: Define the technology infrastructure needed to support applications and data

| PHASE D: TECHNOLOGY ARCHITECTURE ||| "What hardware, software, and infrastructure do we need?" |

Phase E: Opportunities and Solutions

- **Purpose:** Generate initial implementation and migration strategy
- **Key Activities:**
 - Identify major work packages
 - Group work packages into projects
 - Assess dependencies and priorities
- **Key Deliverables:** Implementation and Migration Strategy

OPPORTUNITIES & SOLUTIONS |||| "How do we actually BUILD what we designed in Phases B, C, D?" | PHASE E:

MAPPING | GAP → WORK PACKAGE

PACKAGE || _____ || || GAP (From B, C, D) WORK
 _____ || No unified player view → WP1: Build Player 360
 Platform || Manual payment process → WP2: Payment Gateway Integration || Legacy monolith app
 → WP3: Migrate to Microservices || No cloud infrastructure → WP4: AWS Cloud Setup || No CI/CD
 pipeline → WP5: DevOps Implementation || No real-time analytics → WP6: Data Platform Setup ||

_____ | WORK PACKAGE TEMPLATE |

_____ | Name: Payment Gateway Integration | | Gap
Addressed: Manual payment processing | | Scope: Integrate with 3 payment providers | | Effort: 3

months, 5 engineers || Dependencies: WP4 (Cloud Setup) must complete first || Business Value: Reduce transaction time by 80% || Risk: PCI-DSS compliance requirements |

WORK PACKAGES →

PROJECTS GROUPING |

PROJECT 1:

INFRASTRUCTURE MODERNIZATION || WP4: AWS Cloud Setup || WP5: DevOps Implementation || WP7: Security & Compliance Setup ||| PROJECT 2: CORE PLATFORM || WP1: Player 360 Platform || WP2: Payment Gateway Integration || WP8: Bonus Engine Development ||| PROJECT 3: DATA & ANALYTICS || WP6: Data Platform Setup || WP9: Reporting Dashboard ||| PROJECT 4: LEGACY MIGRATION || WP3: Migrate to Microservices |||

DEPENDENCY MATRIX |

	WP1	WP2	WP3	WP4	WP5	WP6	WP7
WP1	-	-	-	-	-	-	-
WP2	✓	-	-	-	-	-	-
WP3	✓	✓	-	✓	-	-	-
WP4	✓	✓	✓	-	-	-	-
WP5	✓	✓	✓	✓	-	-	-
WP6	✓	✓	✓	✓	✓	-	-
WP7	✓	✓	✓	✓	✓	✓	-

✓ = Depends on (must be done first)

PHASE E: BUILD vs BUY vs REUSE DECISIONS |

FOR EACH GAP, EVALUATE SOLUTIONS: |||

	BUILD	BUY	REUSE	Custom	Product	Existing
Development						
SaaS						
Assets						

Reading: WP2 (Payment)

depends on WP1, WP4, WP5, WP7 ##### Phase F: Migration Planning - Purpose: Finalize detailed implementation and migration plan - Key Activities: - Finalize Architecture Roadmap - Finalize

Implementation Plan - Ensure business value is realized - **Key Deliverables:** Implementation and Migration Plan, Architecture Roadmap

| PHASE F: MIGRATION

PLANNING |

||| 1. FINALIZE ARCHITECTURE ROADMAP || | Timeline: Baseline → Transition 1 → Transition 2 → Target ||| 2. FINALIZE IMPLEMENTATION PLAN || | Detailed: Schedule + Budget + Resources + Milestones ||| 3. ENSURE BUSINESS VALUE IS REALIZED || | Define KPIs, measure before/after, track benefits ||| DELIVERABLES: || • Implementation & Migration Plan (detailed project plans) || • Architecture Roadmap (visual timeline) || • Architecture Contracts (agreements with implementation teams) || |

| WHAT "MIGRATION" MEANS IN PHASE F |

||| PHASE B, C, D PHASE F ||

(DESIGN the Target) (PLAN the Migration) ||| |

| Phase B: ||||| Target Business | | HOW do we |||| Architecture ||| actually GET ||| | from Current | ||| to Target? ||| | | Phase C: | | |

• Timeline |||| Target Data & ||| • Budget |||| App Architecture ||| • Resources |||

| • Milestones |||||

| = MIGRATION |||| Phase D: | | PLAN ||||

Target Tech ||||| Architecture | |

||| WHAT we want HOW we get there |||

Phase G: Implementation

Governance - Purpose: Provide architectural oversight during implementation - **Key Activities:** - Ensure conformance with Target Architecture - Govern implementation projects - Perform Architecture Compliance reviews - **Key Deliverables:** Compliance assessments, Architecture Contracts

| PHASE G: IMPLEMENTATION GOVERNANCE ||| "Are the development teams building what we designed?" || "Is the implementation following the architecture?" |

| COMPLIANCE REVIEW

PROCESS |

		STEP 1: SCHEDULE REVIEW												
At key milestones (design complete, before go-live)			STEP 2: PREPARE CHECKLIST											
Architecture principles followed?			Technology standards used?			Security requirements met?			Integration patterns correct?			Data standards followed?		
 STEP 3: CONDUCT REVIEW || | Review with development team, document findings ||| STEP 4: DOCUMENT RESULTS || | Conformant items || | Deviations found || | Recommendations |||
 STEP 5: DECISION || | ☒ Approved || | ☒ Approved with conditions (fix minor issues) || | ☒ Not approved (rework required) |||

ARCHITECTURE COMPLIANCE CHECKLIST |

EXPECTED	ACTUAL	STATUS	CHECK ITEM
REST standards	REST	☒ Compliant	API Design follows REST standards
Database is PostgreSQL	PostgreSQL	☒ Compliant	Database is PostgreSQL
Runs on Kubernetes (EKS)	EKS	☒ Compliant	Runs on Kubernetes (EKS)
Uses approved auth (OAuth 2.0)	OAuth 2.0	☒ Compliant	Uses approved auth (OAuth 2.0)
JWT only	JWT only	☒ Deviation	Logging to centralized system
DataDog	DataDog	☒ Compliant	Logging to centralized system
Secrets in Vault	Vault	☒ Non-compliant	Secrets in Vault
Env vars	Env vars	☒ Non-compliant	Env vars
CI/CD via GitHub Actions	GH Actions	☒ Compliant	CI/CD via GitHub Actions

RESULT: Approved with conditions - Fix secrets management before go-live |

Phase H:

Architecture Change Management - Purpose: Keep architecture aligned with changing requirements - **Key Activities:** - Monitor technology changes - Monitor business changes - Manage Architecture Change Requests - **Key Deliverables:** Architecture updates, Change Requests

		1. MONITOR TECHNOLOGY CHANGES			New technologies (AWS new services, new frameworks)			End-of-Life (Java 11 EOL, deprecated libraries)			Security vulnerabilities (CVEs, patches)			Vendor changes (pricing, acquisitions)					
		2. MONITOR BUSINESS CHANGES			Strategy changes (new products, new markets)			Regulatory changes (DPDPA, GDPR, gaming compliance)			Organizational changes (new teams, M&A)			Market changes (competitors, customer needs)					
		3. MANAGE ARCHITECTURE CHANGE REQUESTS			Receive change requests from teams			Classify (Minor / Incremental / Major / Emergency)			Assess impact (systems, cost, risk)			Approve / Reject / Defer			Update architecture documents		

Requirements Management (Central)

- Operates throughout all phases
- Handles requirements identification, storage, and change management
- Ensures requirements are addressed in appropriate phases

Key Concepts & Terminology

Architecture Content Framework

Component	Description
Deliverables	Contractually specified work products (e.g., Architecture Definition Document)
Artifacts	Architectural work products (diagrams, catalogs, matrices)
Building Blocks	Components that can be combined to deliver architectures

Building Blocks

1. Architecture Building Blocks (ABBs)
- Define what functionality is required
 - Capture architecture requirements
 - Direct and guide development of SBBs
 - Example: "A customer management capability"
2. Solution Building Blocks (SBBs)
- Define how functionality is implemented
 - Product or vendor-aware
 - Example: "Salesforce CRM"

Enterprise Continuum

|

| ENTERPRISE CONTINUUM = A LIBRARY of reusable architecture patterns || organized from
GENERIC to SPECIFIC on-specific:

Components: - **Architecture Continuum:** Structural elements - **Solutions Continuum:** Implementation elements

Architecture Repository

Component	Description
Architecture Metamodel	Describes how architecture is organized
Architecture Capability	Parameters, structures, processes for architecture
Architecture Landscape	Architectural representations at different levels
Standards Information Base (SIB)	Standards for architecture work
Reference Library	Guidelines, templates, patterns
Governance Log	Record of governance activity

Architecture Governance

Purpose: Ensure architectures are developed consistently and compliance is maintained

Key Elements: - Architecture Board - Architecture Compliance - Architecture Contracts - Dispensations (approved deviations)

Stakeholder Management

Key Stakeholders in EA: - Sponsors/Executives - Business Users - IT Operations - Project Managers - Developers - External Partners

Stakeholder Analysis Techniques: - Power/Interest Grid - Stakeholder Map - RACI Matrix

Views and Viewpoints

- **View:** Representation of a system from the perspective of a stakeholder
- **Viewpoint:** Definition of the perspective from which a view is taken
- **Concern:** Interest in a system relevant to stakeholders

Architecture Principles

Structure of a Principle: 1. Name 2. Statement 3. Rationale 4. Implications

Example Principle: - **Name:** Technology Independence - **Statement:** Applications are independent of specific technology choices - **Rationale:** Allows technology to change without affecting applications - **Implications:** Requires standard interfaces, may increase development cost

Common Interview Questions

Basic Level Questions

Q1: What is TOGAF? > TOGAF is an enterprise architecture framework that provides a comprehensive approach to designing, planning, implementing, and governing enterprise IT architecture. It includes the ADM methodology, content framework, and various reference models.

Q2: What are the four architecture domains in TOGAF? > 1. Business Architecture > 2. Data Architecture > 3. Application Architecture > 4. Technology Architecture

Q3: What is ADM? > The Architecture Development Method is TOGAF's core - a step-by-step, iterative approach to developing enterprise architecture. It consists of a Preliminary Phase plus phases A through H, with Requirements Management at the center.

Q4: What happens in the Preliminary Phase? > The organization prepares for TOGAF adoption by:
> - Defining the enterprise scope > - Establishing architecture principles > - Selecting/tailoring the framework > - Setting up the Architecture Repository > - Defining governance structures

Q5: What is the difference between ABB and SBB? > - **ABB (Architecture Building Block):** Defines WHAT functionality is required; technology-agnostic > - **SBB (Solution Building Block):** Defines HOW the functionality is implemented; product/vendor-specific

Intermediate Level Questions

Q6: Explain the Enterprise Continuum. > The Enterprise Continuum is a view of the Architecture Repository showing evolution from generic to organization-specific architectures. It includes: > - Foundation Architectures (most generic) > - Common Systems Architectures > - Industry Architectures > - Organization-Specific Architectures (most specific) > > It helps organizations leverage existing assets and accelerate architecture development.

		Most Generic	Most Specific
(TRM, standards)	(Your systems)		
			ENTERPRISE
CONTINUUM LEVELS			
			LEVEL
DESCRIPTION & EXAMPLES			
			FOUNDATION
Universal standards, applicable to ANY organization ARCHITECTURES (Most Generic)			
Examples: • TOGAF Technical Reference Model (TRM) • Operating systems, networking, databases • TCP/IP, HTTP, SQL standards • Basic security models			
			COMMON
SYSTEMS Architectures for common business functions ARCHITECTURES Examples: • ERP architecture patterns • CRM system patterns • E-commerce patterns • Data warehouse patterns • Identity & access management			
			INDUSTRY
Specific to an industry vertical ARCHITECTURES Examples: • Banking: Core banking, payment systems • Gaming: Player management, RNG, bonus engines • Healthcare: HL7, FHIR standards • Retail: POS systems, inventory management • Telecom: Billing, network management			
			ORGANIZATION-
Your company's specific implementations SPECIFIC (Most Specific) Examples: • Your custom player platform • Your specific payment gateway integration • Your data lake architecture • Your microservices for your business			
			BENEFITS
			1. REUSE — Don't
reinvent the wheel - use existing patterns 2. ACCELERATE — Start from industry			
patterns, customize for your org 3. CONSISTENCY — Common vocabulary across			
organization 4. LEVERAGE — Learn from industry best practices 5. CLASSIFY			
— Organize architecture assets systematically			

Q7: What is the purpose of Phase E (Opportunities and Solutions)? > Phase E identifies work packages and projects to transform from baseline to target architecture. It: > - Consolidates gaps across architecture domains > - Groups changes into work packages > - Identifies transition architectures > - Assesses dependencies and priorities > - Creates initial implementation strategy

Q8: How does Requirements Management work in TOGAF? > Requirements Management is a continuous process operating at the center of the ADM. It: > - Captures requirements throughout all phases > - Manages the Requirements Repository > - Handles requirement changes > - Ensures requirements are addressed in appropriate phases > - Maintains traceability

Q9: What is Architecture Governance? > Architecture Governance is a framework for managing and controlling enterprise architecture at all levels. Key components include: > - Architecture Board (governing body) > - Architecture Compliance reviews > - Architecture Contracts (agreements between teams) > - Dispensations (approved deviations from standards)

Q10: Explain the concept of Transition Architectures. > Transition Architectures are intermediate states between the Baseline and Target Architecture. They: > - Provide incremental business value > - Reduce implementation risk > - Allow gradual transformation > - Are defined in Phase E and refined in Phase F

Advanced Level Questions

Q11: How do you handle a situation where business requirements conflict with technical constraints? > 1. Document both perspectives clearly > 2. Engage stakeholders from both sides > 3. Analyze trade-offs using impact assessment > 4. Consider transition architectures as compromise > 5. Escalate to Architecture Board if needed > 6. Document decisions and rationale > 7. Update Architecture Principles if necessary

Q12: How would you adapt ADM for Agile environments? > - Use iterative cycles aligned with sprints > - Focus on "just enough" architecture > - Prioritize Architecture Runway > - Integrate with frameworks like SAFe > - Use lightweight documentation > - Continuous stakeholder engagement > - Adapt Phase G for continuous delivery > - Implement architecture as code where possible

Q13: How do you measure architecture effectiveness? > - Time-to-market for new capabilities > - Reuse of architecture assets > - Compliance rates with standards > - Technical debt reduction > - Business agility improvements > - Cost savings from standardization > - Stakeholder satisfaction scores > - Architecture maturity assessments

Q14: Describe how you would handle a merger/acquisition from an EA perspective. > 1. **Phase A:** Reassess Architecture Vision for combined entity > 2. **Phase B:** Analyze and merge business processes > 3. **Phase C:** Assess data integration and application rationalization > 4. **Phase D:** Consolidate infrastructure and platforms > 5. **Phase E/F:** Plan integration roadmap with quick wins > 6. Key considerations: > - Cultural alignment > - Data migration and quality > - Regulatory compliance > - Customer impact minimization

Q15: What's the relationship between TOGAF and other frameworks? > - **COBIT**: Complements TOGAF for IT governance > - **ITIL**: Aligned for service management > - **Zachman**: Can use as taxonomy within TOGAF > - **SAFe**: Integrates for Agile at scale > - **ArchiMate**: Modeling language that complements TOGAF > - **BPMN**: For business process modeling in Phase B

Scenario-Based Questions

Q16: Your organization wants to move to cloud. How would you approach this using TOGAF? > 1. **Preliminary**: Define cloud principles and standards > 2. **Phase A**: Create Cloud Migration Vision, identify stakeholders > 3. **Phase B**: Identify business processes impacted > 4. **Phase C**: Assess applications for cloud readiness (6 Rs: Rehost, Replatform, Repurchase, Refactor, Retain, Retire) > 5. **Phase D**: Design target cloud infrastructure > 6. **Phase E**: Identify migration waves and dependencies > 7. **Phase F**: Create detailed migration plan > 8. **Phase G**: Govern implementation, ensure security compliance > 9. **Phase H**: Establish cloud operations and optimization

Q17: How do you handle resistance to enterprise architecture? > - Demonstrate business value with quick wins > - Speak in business language, not technical jargon > - Involve stakeholders early in the process > - Show how EA enables rather than constrains > - Provide training and awareness programs > - Get executive sponsorship > - Start small and scale successes > - Measure and communicate benefits

Study Tips

For TOGAF Certification

TOGAF 9.2 Certification Paths: 1. **TOGAF 9 Foundation (Level 1)**: Basic understanding - 40 multiple choice questions 2. **TOGAF 9 Certified (Level 2)**: Applied knowledge - 8 scenario-based questions 3. **TOGAF 9 Certified (Combined)**: Both exams taken together

Study Recommendations

1. **Read the Official TOGAF Standard**
 - Available free from The Open Group website
 - Focus on ADM, Content Framework, and Governance
2. **Practice with Sample Questions**
 - Official practice exams from The Open Group
 - Multiple choice format for Part 1
 - Scenario-based for Part 2
3. **Memorize Key Terms**
 - ADM phases and their objectives
 - Building blocks (ABB vs SBB)
 - Deliverables vs Artifacts

- Governance components

4. Understand, Don't Just Memorize

- Know WHY each phase exists
- Understand relationships between phases
- Be able to apply concepts to scenarios

5. Create Mind Maps

- Visual representations help retention
- Map relationships between concepts

Key Areas to Focus

Area	Weight in Exam
ADM Phases	High
Architecture Content	High
Enterprise Continuum	Medium
Architecture Governance	Medium
Architecture Capability	Medium
Reference Models	Low

Common Mistakes to Avoid

✗ Confusing phases (especially B, C, D) ✗ Mixing up deliverables and artifacts ✗ Forgetting Requirements Management is continuous ✗ Not understanding iteration in ADM ✗ Ignoring stakeholder concerns ✗ Over-engineering solutions

Quick Reference - ADM Phase Outputs

Phase	Primary Output
Preliminary	Organizational Model, Principles
A	Architecture Vision, SOW
B	Business Architecture
C	Data & Application Architecture
D	Technology Architecture
E	Implementation Strategy
F	Migration Plan

Phase	Primary Output
G	Compliance Assessments
H	Change Requests
